## ■ Description

SPD-20HP thermally protected Surge Protective Device is a self-protected device which is specially designed to be used in outdoor and commercial LED lighting fixtures for transient overvoltage protection. It is constructed with thermally protected varistor technology. Its built-in thermal disconnect function provides additional protection to prevent catastrophic failure and fire hazard even under the extreme circumstances of varistor end-of-life or sustaining over voltage conditions.

The SPD-20HP provides coordinated surge protection with more LED drivers than other SPDs due to its exceptionally low Measured Limiting Voltage (MLV) and Voltage Protection Level ( $U_p$ ). This lower clamping voltage can also help to extend the life-time of the luminaire. It also features a built-in LED indicator that notifies when replacement of the module is needed.

**NOTE:** 1. MCOV/U<sub>c</sub>: Maximum Continuous Operating Voltage - maximum r.m.s. voltage that could be continuously applied to the SPD.  
 2. MLV: UL1449 Measured limiting voltage; the highest value of residual voltage measurements during the application of impulses of 8/20μs nominal discharge current (I<sub>n</sub>); an average voltage value of 15 impulses.  
 3. U<sub>p</sub> : IEC 61643-11 Voltage protection level; the highest value of residual voltage measurements during the application of impulses of 8/20μs nominal discharge current(I<sub>n</sub>); a rounding voltage value of maximum measurement.  
 4. Nominal Discharge Current I<sub>n</sub> (A): The nominal discharge current is a measure of the SPDs endurance capability; 15 impulses of discharge current uses the 8/20μs current waveform.  
 5. Maximum Discharge Current I<sub>max</sub> (A): The maximum discharge current is a measure of the SPDs maximum capability; single impulse of discharge current uses the 8/20μs current waveform. All Devices pass maximum discharge current with possible, safe opening of thermal disconnect.

**■ INSTALLATION**

1. This document provides detailed information on how to install and operate the SPD-20HP of Surge Protective Devices(SPDS).
2. The SPD-20HP of Surge Protective Devices are installed/connected in series with the line of TN System.
3. Incorrect installation may significantly impair the performance of the SPD. It is particularly important that all installation procedures and guidelines be followed exactly.
4. Before starting any installation procedures, verify service voltage(AC or DC)with a volt meter to ensure that the correct model has been selected for the supply voltage.
5. DO NOT INSTALL THE SPD IF MEASURED VOLTAGE EXCEEDS UNIT RATINGS.
6. REMOVE POWER FROM ELECTRICAL SYSTEM PRIOR TO INSTALLATION.
7. ENSURE THAT ALL CONNECTIONS ARE CORRECT BEFORE ENERGIZING.
8. Apply power(energize),LED indicator should illuminate. If LED is out, the SPD requires service.
9. Never install on an ungrounded system.
